Professional Summary

Unity Game Developer with end-to-end experience shipping mobile games to both Google Play and the App Store. Hands-on owner of client-side development: gameplay systems, UI, data-driven level/content systems, SDK integrations (Firebase, ads, IAP, attribution), and platform builds and store releases. Daily practitioner of AI-assisted development, using Claude Code in real production work for over a year. Comfortable working independently as the primary Unity developer on a project, and communicating tradeoffs clearly across product, design, art, and QA.

Experience

Unity Game Developer

Riseup Labs

October 2025 – Present

- Core developer on two live hybrid-casual mobile games published with renowned international publishers: **Pop'n Sort** ([Google Play](#)) with **Supersonic**, and **Supermarket Sort Factory** ([App Store](#)) with **Moonee** — implemented core game logic, UI systems, and gameplay features.
- Created **AI-assisted level design tooling** using custom Claude Code Skills to generate and iterate on levels for Pop'n Sort, speeding up content production.
- Built **CPI (cost-per-install) marketing videos and interactive ads** for renowned international publishers including **Voodoo** and **Gameloft**, iterating rapidly on hooks and gameplay capture to optimize install rates.
- Rapid prototyping of new game concepts in Unity/C#, taking ideas from design brief to playable build in short cycles.
- Collaborated with cross-functional teams (design, art, QA, publishing partners) in a fast-paced production environment.

Software Engineer II (Unity)

Nagorik Technology

June 2024 – October 2025

- Developed gameplay systems, enemy AI, and UI for multiple 2D and 3D mobile games shipped to **both Google Play and the App Store**.
- Handled the **full mobile release pipeline**: Android builds and Play Console releases, iOS builds, provisioning profiles, certificates, and App Store submission and review.
- Integrated and debugged **mobile SDKs** including Firebase, Google Sign-In, RevenueCat (IAP), and Supersonic — resolving SDK conflicts, Gradle manifest merger issues, and platform-specific build problems.
- Built **data-driven systems** using ScriptableObjects for level configuration, content tuning, and game parameters.
- Optimized iOS build size (texture compression, package audits) and overall runtime performance for low-end devices.
- Worked in Agile sprints with artists, testers, and designers; trained junior developers in Unity fundamentals.

Freelance Game Developer

Remote

During B.Sc. studies (until June 2024)

- Delivered **freelance Unity projects for clients** alongside university studies, handling requirements, development, and delivery independently.
- Built games and prototypes end-to-end — gameplay programming, UI, and polish — developing early habits of **ownership and independent delivery**.

AI-Assisted Development

- **Claude Code** — 1 year of daily production use for feature development, debugging, refactoring, and documentation in Unity/C# projects.
- Built **custom Claude Code Skills** for level design on **Pop'n Sort**, turning level creation into an AI-assisted content pipeline — authored reusable skills that generate and tune level layouts against gameplay constraints.
- Experienced in **agent-driven workflows**: planning tasks, directing the agent through implementation, and critically reviewing AI-generated code against the same quality and performance bar as hand-written code.
- Use AI tooling to accelerate prototyping, editor tooling, and boilerplate-heavy systems while keeping architecture decisions hands-on.

Technical Skills

- **Game Engine:** Unity (2D/3D, mobile-focused), basic Unreal Engine
- **Languages:** C#, C++, Python, JavaScript
- **Mobile Release:** Android/Google Play releases, iOS provisioning & App Store submission, build debugging
- **SDKs & Services:** Firebase, RevenueCat (IAP), ad/attribution SDKs, Google Sign-In, Unity Authentication, Unity Relay
- **Architecture:** Data-driven design with ScriptableObjects, game state management, design patterns (Observer, State/FSM, Command, Singleton), prefab workflows
- **Tools:** Git (daily workflow), Claude Code, Visual Studio, DOTween, Blender, Trello, Shader Graph
- **Other:** Procedural generation, Multiplayer Netcode (Unity NGO), Unity Job System, graphics optimization

Education

B.Sc. in Computer Science and Engineering

Khulna University of Engineering & Technology (KUET), Khulna, Bangladesh

Relevant Coursework: Object Oriented Programming, Computer Graphics, AI for Games, Software Engineering

Selected Projects

Pop'n Sort & Supermarket Sort Factory – Hybrid-Casual Games

- **Description:** Two live sorting/matching hybrid-casual games published by Riseup Labs.
- **Tools:** Unity, C#, DOTween, ScriptableObjects, Claude Code
- **Contribution:** **Core game logic** and **UI implementation** on both titles; **AI-assisted level design pipeline** for Pop'n Sort built with custom Claude Code Skills.
- [Pop'n Sort \(Google Play\)](#) | [Supermarket Sort Factory \(App Store\)](#)

Ant March Adventure – Roguelike Game

- **Description:** A roguelike where players collect eggs to build a line of ants, protect them from hostile bugs, and guide them to the nest, with unique obstacles and dynamic weather per level.
- **Tools:** Unity, C#, DOTween, ScriptableObjects
- **Contribution:** Core gameplay programming, **level randomization each run**, **real-time path drawing**, **follower ant queue**, **dynamic weather and obstacle systems**, and **skill activation mechanics**
- [Play Ant March Adventure](#)

Zen Merge Puzzle – Casual Puzzle Game

- **Description:** A soothing yet mentally challenging puzzle game where Yin and Yang move in mirrored directions through traps and mazes to unite on the Harmony tile.
- **Tools:** Unity, C#, ScriptableObjects, Blender
- **Contribution:** Core gameplay programming, input handling, visuals, **game optimization**, and codebase management
- [Play Zen Merge Puzzle](#)

Tic Tac Toe – Multiplayer Game

- **Description:** Classic Tic Tac Toe with multiplayer support using Unity Netcode: room creation, match-making, gameplay sync, and a ChatWheel system.
- **Tools:** Unity, C#, Unity Netcode for GameObjects (NGO), Unity Relay
- **Contribution:** **Networking implementation, client-server game logic synchronization**, and UI design

Certifications

- Unity Essentials: One Month to Game Development Proficiency – **Trainer**, Nagorik Technologies Ltd. (Dec 2024)
- Unity Essentials: One Month to Game Development Proficiency – **Trainee**, Nagorik Technologies Ltd. (June 2024)

Additional Information

- Languages: Fluent in English, Bangla
- Interests: Metroidvania games, Soulslike games, procedural generation, game jams
