Summary

Unity Game Developer with end-to-end experience shipping hybrid-casual and mobile games to Google Play and the App Store alongside international publishers (Supersonic, Moonee, Voodoo, Gameloft). Hands-on owner of client-side development — gameplay systems, UI, data-driven content, and SDK integrations (Firebase, ads, IAP, attribution) — through platform builds and store release. Experienced in AR/VR and AI-assisted development pipelines. Works independently as the primary Unity developer while communicating tradeoffs clearly across product, design, art, and QA.

Experience

Unity Game Developer, Riseup Labs – Dhaka, Bangladesh Oct 2025 – present

- Core developer on two live hybrid-casual mobile games published with international publishers: **Pop'n Sort** ([Google Play](#)) with **Supersonic**, and **Supermarket Sort Factory** ([App Store](#)) with **Moonee** — implemented core game logic, UI systems, and gameplay features.
- Created **AI-assisted level design tooling** using custom Claude Code Skills to generate and iterate on levels for Pop'n Sort, speeding up content production.
- Built **CPI marketing videos and interactive playable ads** for international publishers including **Voodoo** and **Gameloft**, iterating rapidly on hooks and gameplay capture to optimize install rates.
- Rapid prototyping of new game concepts in Unity/C#, taking ideas from design brief to playable build in short cycles.
- Collaborated with cross-functional teams (design, art, QA, publishing partners) in a fast-paced production environment.

Software Engineer II (Unity), Nagorik Technology – Dhaka, Bangladesh June 2024 – Oct 2025

- Developed gameplay systems, enemy AI, and UI for multiple 2D and 3D mobile games shipped to **both Google Play and the App Store**.
- Handled the **full mobile release pipeline**: Android/Play Console releases, iOS builds, provisioning profiles, certificates, and App Store submission and review.
- Integrated and debugged **mobile SDKs** (Firebase, Google Sign-In, RevenueCat IAP, Supersonic), resolving SDK conflicts, Gradle manifest merger issues, and platform-specific build problems.
- Built **data-driven systems** with ScriptableObjects for level configuration and content tuning; optimized iOS build size and runtime performance for low-end devices.
- Worked in Agile sprints with artists, testers, and designers; trained junior developers in Unity fundamentals.

Game Developer, Freelance – Remote Until June 2024

- Delivered freelance Unity projects for clients alongside university studies — handled requirements, development, and delivery independently.
- Built games and prototypes end-to-end (gameplay, UI, polish), developing early habits of ownership and independent delivery.

AI-Assisted Development

- Build **custom Claude Code Skills** that turn repetitive game tasks — such as level generation and tuning — into **AI-assisted pipelines** that produce content against defined gameplay constraints.
- Experienced in **agent-driven workflows**: scoping tasks, directing implementation, and reviewing AI-generated code against the same quality bar as hand-written code.
- Use AI tooling to accelerate prototyping, editor tooling, and boilerplate-heavy systems while keeping architecture and design decisions hands-on.

Technical Skills

Engine & Language: Unity (2D/3D, mobile-focused), C#; basic Unreal Engine, Python

Mobile Release: Android/Google Play releases, iOS provisioning & App Store submission, build debugging

SDKs & Services: Firebase, RevenueCat (IAP), ad/attribution SDKs, Google Sign-In, Unity Authentication & Relay

Architecture: Data-driven design (ScriptableObjects), state management, design patterns (Observer, FSM, Command, Singleton)

Specializations: AR/VR, procedural generation, multiplayer netcode (Unity NGO), graphics optimization

Tools: Git, Claude Code, Visual Studio, DOTween, Shader Graph, Blender

Education

Khulna University of Engineering & Technology (KUET), B.Sc. in Computer Science and Engineering – Khulna, Bangladesh

- Relevant coursework: Object Oriented Programming, Computer Graphics, AI for Games, Software Engineering.

Selected Projects

Pop'n Sort — Hybrid-casual sorting game, live with Supersonic

- **Core game logic and UI** built an **AI-assisted level design pipeline** with custom Claude Code Skills. (*Unity, C#, DOTween, ScriptableObjects*) — [Google Play](#)

Supermarket Sort Factory — Hybrid-casual sorting game, live with Moonee

- **Core game logic and UI implementation** for a published live title. (*Unity, C#, DOTween, ScriptableObjects*) — [App Store](#)

Color Craft — Casual color-mixing puzzle game

- Built the **entire game: stencil paint logic and color-mixing mechanics** where players replicate reference images across levels; core gameplay, UI, and shaders. (*Unity, C#, Shader Graph*) — [Google Play](#)

Zen Merge Puzzle — Casual mirrored-movement puzzle game

- Core gameplay, input handling, visuals, and **game optimization** Yin & Yang move in mirrored directions through traps to unite on the Harmony tile. (*Unity, C#, ScriptableObjects, Blender*) — [Google Play](#)

Ant March Adventure — Roguelike

- **Per-run level randomization**, real-time path drawing, follower-ant queue, and dynamic weather/obstacle systems. (*Unity, C#, DOTween, ScriptableObjects*) — [Google Play](#)

Tic Tac Toe — Online multiplayer

- **Networking and client-server state sync** with room creation, matchmaking, and a ChatWheel. (*Unity, C#, Netcode for GameObjects, Relay*)

Certifications

- Unity Essentials: One Month to Game Development Proficiency — **Trainer**, Nagorik Technologies Ltd. (Dec 2024)
- Unity Essentials: One Month to Game Development Proficiency — **Trainee**, Nagorik Technologies Ltd. (June 2024)

Additional Information

- Languages: Fluent in English, Bangla
- Interests: Metroidvania & Soulslike games, procedural generation, game jams
